REASON FOR ALLOWANCE

1. Keane, Tomasiak disclose various types of wheel assembly comprising a main body, two wheels, and two positioning hollow shafts, wherein the main body has two opposite sides each formed with a pivot hole, each of the two wheels is rotatably mounted on the main body and has a center formed with a step-shaped positioning hole; each of the two positioning shafts is mounted on a respective one of the two wheels and is combined with the main body; each of the two positioning shafts has a first end formed with a plurality of elastic positioning plates each extended the respective pivot hole of the main body and each having a distal end formed with a hook-shaped locking portion. Chui discloses a structure of a golf cart wheel comprising a shaft rod with a bushing over the shaft to allow rotation of the wheel. Liao discloses the teaching of a wheel comprising positioning shaft extending through the positioning hole of the wheel. However, none of the references of record suggests a wheel assembly comprising a main body having two opposite sides with a pivot hole for receiving a shaft, wherein each of the two positioning shafts has an inside formed with a step-shaped limit hole axially extended through a whole length of each of the two positioning shafts and communicating with the slits and a retaining rod is mounted in the limit hole of the respective positioning shaft in the manner defined in the instant claim 1 and in combination with other limitations of the claim. Therefore, claims 2-4, 6, 11-12, depending therefrom, are considered to be allowable.
